SlateScape® 2000/Colorlith HP – Environmental Statement

The two recycled materials in SlateScape® 2000/Colorlith HP are Newsprint and Silica Fume.

Newsprint: used as reinforcement for the sheet. It is refined in water and is added to the manufacturing process as a liquid. The total content of newsprint on a weight percentage basis is 4 to 6%.

Silica Fume: is generated during production of Ferrosilicon metal. Each particle is produced as Ferrosilicon gas is cooled and solidified. The ultra fine silica is used to react with the Portland Cement and produce a very high strength composite. Its total content is also 4 to 6%.
