

PATINA

PANELS THAT EVOLVE OVER TIME

As seasons change and Patina is exposed to the elements, a subtle lighter and darker shading will occur on the surface, causing the façade to acquire a distinctive patina. The panels will have a noticeably softer appearance, as opposed to the stark color hue when the panels were newly installed. Available in several timeless colors, this variegated look is more pronounced on darker grays and charcoal color tones.

STYLES AND SURFACE

This through colored material's authenticity is expressed through slight color variations, fine sanding lines and the way light plays on its natural, textured surface. Over time, it will mature and develop a noticeably softer appearance.

DURABILITY AND PERFORMANCE

This material has a unique surface treatment that makes it powerfully resistant to water staining and dirt which ensures its longevity and durability. It is sound and weather-resistant, low maintenance, non-combustible, flexible, and easy-to-handle.

UNIQUE COMPOSITION

With a strong composition of cement, mineral fillers, cellulose, non-toxic, organic fibers and a dash of water, Patina is made of purely natural raw materials. This material is sustainable, fully reusable, impressively strong and durable.
